

Felt Like It

From kids crafts and stylish fedoras to haute couture and interior accents, felt is putting textural punctuation on contemporary design. The oldest fabric known to mankind has been redefined with a chic, modern and stylish appeal.

Canada's historic connection to felt fabric continues with this current trend. A step back in time reminds us that it was Europe's passion for fashionable felt hats that sent coureur des bois scrambling far and wide for the coveted beaver pelts that eventually colonized Canada.

Today, industrial designers have taken felt off fashionable heads and into the home with stunning results. Adding to the attractive appeal of wool felt is its renewable and environmentally friendly quality.
