

## Burst Your Bubble

Designers are always looking for innovative ideas that burst the bubble on just that, bubbles.

Transforming utilitarian shapes like a circle with clever design enjoys a long history. A round light fixture that took inspiration from an artichoke in 1925 is still considered a masterpiece today.

And the ideas just keep popping-up. Imagine my surprise when I stumbled on a round pod that would make the Swiss Family Robinson yodel with delight. A spherical tree house, designed right here in British Columbia, which makes a whimsical design statement high atop old growth cedars.

It's mind-blowing to think that a field of tiny round light bubbles can transform the English Countryside into an explosion of creativity with a magical nightscape. It's nice to know that a simple circle can still bounce the imagination.
